

输入与输出样例

模拟样本 1：语音识别模型输入与输出

输入（符合嵌入式精简需求）

json

```
{
  "system_bg": "HomeAssistant已连地下室水位传感器、主水泵；用户偏好：水位超阈值时先语音提醒，再自动开水泵",
  "user_speech_text": "地下室水位好像超了，快处理",
  "output_requirement": {
    "speech_feedback_text": "8字内口语化反馈",
    "ha_flood_command": "格式为
{\\\"command_type\\\":\\\"flood_control\\\",\\\"execute\\\":true/false,\\\"device\\\":\\\"水泵/传感器\\\",\\\"threshold_check\\\":true/false}"
  }
}
```

输出

json

```
{
  "speech_feedback_text": "已开水泵提醒",
  "ha_flood_command": {
    "command_type": "flood_control",
    "execute": true,
    "device": "水泵",
    "threshold_check": true
  }
}
```

模拟样本 2：日志学习模型输入与输出

输入

json

```
{
  "input_logs": [
    {"time": "2024-05-25 10:10", "user_speech": "水位超了",
    "ha_command": {
      "command_type": "flood_control", "execute": true, "device": "水泵",
      "threshold_check": true, "feedback": "已开水泵提醒"}},
    {"time": "2024-05-25 15:30", "user_speech": "查下水位",
    "ha_command": {
      "command_type": "flood_control", "execute": false, "device": "传感器",
      "threshold_check": true, "feedback": "水位正常"}}
  ],
  "task": "1. 学习日志规律：用户说“水位超了”触发水泵启动，说“查下水位”仅触发传感器检测；2. 生成50字内历史信息；3. 检查是否需更新样本1的system_bg",
  "output_requirement": {
    "history_info": "含时间、用户指令、对应设备操作",
    "updated_system_bg": "无冲突填“无需更新”，有冲突则补充"
  }
}
```

输出

json

```
{
  "history_info": "2024-05-25用户2次指令：“水位超了”开水泵，“查下水位”用传感器检测，均完成操作",
  "updated_system_bg": "无需更新"
}
```

模拟样本 3：日志学习与提示词更新输入与输出

输入

json

```
{
  "input_logs": [
    {"time": "2024-05-26 08:45", "user_speech": "水位降了，关水泵",
    "ha_command": {
      "command_type": "flood_control", "execute": false, "device": "水泵",
      "threshold_check": true, "feedback": "已关水泵"}},
    {"time": "2024-05-26 19:20", "user_speech": "预警误报，取消检测",
    "ha_command": {
      "command_type": "flood_control", "execute": false, "device": "传感器",
      "threshold_check": true, "feedback": "取消检测"}}
  ],
  "task": "1. 学习日志规律：用户说“水位降了”触发水泵关闭，说“取消检测”仅触发传感器检测；2. 生成50字内历史信息；3. 检查是否需更新样本1的system_bg",
  "output_requirement": {
    "history_info": "含时间、用户指令、对应设备操作",
    "updated_system_bg": "无冲突填“无需更新”，有冲突则补充"
  }
}
```

```
{\ "command_type\":\ "flood_control\","\ "execute\":false,\ "device\":\ "传感器\","\ "threshold_check\":false},\ "feedback\":\ "已取消检测\"}"
],
  "task": "1. 学习新规律：用户“关水泵/取消检测”触发设备停止；2. 生成50字内历史信息；3. 更新样本1的system_bg补充新偏好",
  "output_requirement": {
    "history_info": "含时间、停止操作触发词、设备",
    "updated_system_bg": "在原bg后补充新偏好"
  }
}
```

输出

json

```
{
  "history_info": "2024-05-26用户2次停止指令：“水位降了”关水泵，“预警误报”取消传感器检测，操作均生效",
  "updated_system_bg": "HomeAssistant已连地下室水位传感器、主水泵；用户偏好：水位超阈值时先语音提醒，再自动开水泵；新增：用户说“关水泵/取消检测”时，停止对应设备"
}
```
